TÜBİTAK SAGE TO OPEN NEW THERMAL BATTERY MANUFACTURING FACILITY

TÜBİTAK SAGE opened a new thermal battery manufacturing facility to expand capacity and meet growth in customer demand. The new facility, having high-tech automated production systems will provide TÜBİTAK SAGE to supply batteries with improved quality and greater value.

TÜBİTAK SAGE, being the sole national thermal battery supplier in Turkey, started development of thermal battery studies in 2002. As a result of extensive efforts, thermal battery technology including design, production and test capabilities has been introduced to Defense Industry in 2006.

To date, TUBITAK SAGE has designed and manufactured more than fifteen different thermal battery types qualified with respect to globally accepted military standards.

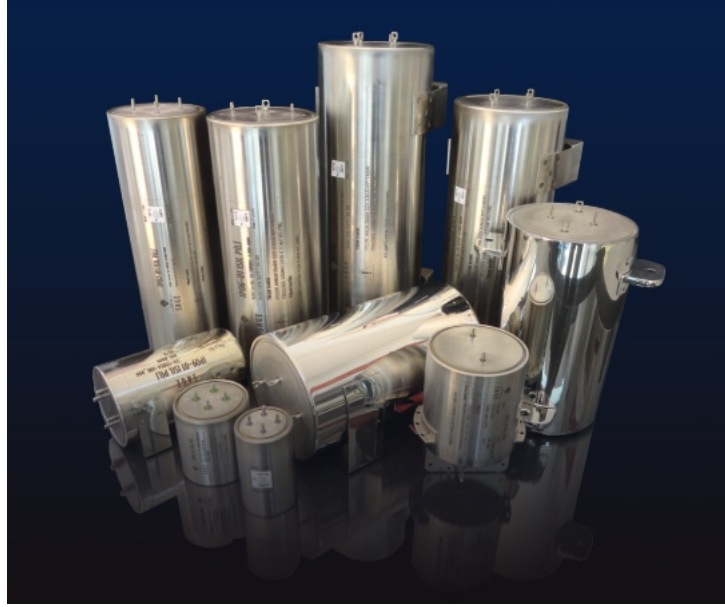

Thermal batteries produced by TÜBİTAK SAGE are being used in systems developed by TÜBİTAK SAGE and supplied to Turkish defence companies such as ASELSAN A.Ş., ROKETSAN A.Ş., and Turkish Armed Forces producing smart munitions systems. The batteries are also being exported to overseas markets since 2012.

The new manufacturing facility, having about 3.000 square meters closed area, was opened in 2013 and it will enable TÜBİTAK SAGE to meet the growing thermal battery demand in domestic and overseas markets. The new
